

MN GROUPS Property Maintenance Management System Blueprint

Executive Summary

MN GROUPS is a real estate company managing PGs, residential and commercial rental properties. This document outlines the problem, proposed solution, workflows, technology stack, and implementation roadmap for a digital maintenance management platform.

Current Problems

- No centralized complaint system
- Manual phone-call based coordination
- No tracking or accountability
- Delayed repairs
- Poor tenant satisfaction
- No vendor performance data

Solution

- Tenant mobile app to raise complaints with photos.
- Automatic vendor assignment by category.
- Vendor app for accepting/completing jobs.
- Admin web portal for monitoring and reports.
- Completion reports with before/after photos and ratings.

User Roles

- Tenant
- Vendor
- Property Manager
- Admin/Owner

Complaint Categories

- Electrical
- Plumbing
- Carpentry
- Painting
- Cleaning
- Civil Work
- Internet
- Air Conditioning
- Appliances
- Security
- Other

Workflow

- Tenant raises complaint
- Uploads photos
- Selects category
- System assigns vendor
- Vendor accepts
- Repair completed
- Completion photos uploaded
- Tenant verifies
- Manager approves
- Report generated

Technology Stack

- Flutter mobile apps
- React web portal
- Node.js or FastAPI backend
- PostgreSQL database
- AWS/Azure cloud
- Firebase notifications
- Google Maps API

Laptop-based Management Portal

- Property Management
- Tenant Management
- Maintenance Dashboard
- Vendor Management
- Finance
- Inventory
- Reports & Analytics
- Document Management

Development Roadmap

- Phase 1: Requirements & UI/UX
- Phase 2: Development
- Phase 3: Testing
- Phase 4: Deployment
- Phase 5: AI enhancements

Future Vision

- AI complaint categorization
- Predictive maintenance
- Digital agreements

- Rent collection
- Business intelligence dashboards

Concept App & Dashboard Mockups

MN GROUPS

PROPERTY MAINTENANCE MANAGEMENT SYSTEM

Business Requirements Document

A Complete Solution for Maintenance Management of PG, Residential & Commercial Properties

Version 1.0

Date May 2025

Prepared By MN GROUPS

1. INTRODUCTION

MN GROUPS manages a wide range of rental properties including PGs, residential units, and commercial spaces. As the number of properties and tenants grows, managing maintenance requests manually becomes inefficient.

This system is designed to streamline the maintenance process, improve communication, increase transparency, and ensure faster resolution of tenant issues.

1.1 About MN GROUPS

MN GROUPS is a real estate management company that provides high-quality rental accommodations and commercial spaces.

1.2 Types of Properties

- PG (Paying Guest Accommodations)
- Residential Properties
- Commercial Properties

2. PROBLEM STATEMENT

When tenants face issues (e.g., leaking taps, electrical faults, painting, etc.), they contact the property manager. The manager then contacts the vendor. This manual process leads to:

- ✗ Too many phone calls and follow-ups
- ✗ Complaints may be forgotten
- ✗ Delayed repairs and unhappy tenants
- ✗ No proper tracking or accountability
- ✗ No way to measure vendor performance
- ✗ Owners have no real-time visibility
- ✗ No digital record of repairs and expenses

As the business grows, this manual system becomes unmanageable.

4. HOW THE SYSTEM WORKS

- 1 Tenant logs in to the app.
- 2 Tenant creates a complaint.
- 3 Tenant selects issue category.
- 4 Tenant adds description.
- 5 Tenant uploads photos/videos.
- 6 Complaint is submitted.
- 7 System assigns to the correct vendor.
- 8 Vendor receives notification.
- 9 Vendor accepts the job.
- 10 Vendor visits the property.
- 11 Vendor completes the repair and uploads photos.
- 12 Tenant confirms the completion.
- 13 Manager reviews and approves.
- 14 Complaint is closed and report is generated.

5. TENANT APP – KEY SCREENS

6. VENDOR APP – KEY SCREENS

7. WEB PORTAL – DASHBOARD SCREENS
